Quolin is a crypto investing app built for people who don't trust crypto, and sold through the banks they do trust. It gets to know each client the way an adviser would, shows them only what is right for them, sets a personal limit, and keeps a record a regulator can check years later.

01 The problem: people know crypto, and don't trust it

UK and US, 2025

91% → 8%
of UK adults have heard of crypto, but only 8% own it, down from 12% a year earlier.

22%
of UK non-owners say the main reason is **"I don't understand how it works"**. It is the #1 reason.

$11.4bn
lost to crypto fraud in the US in 2025, up 22%. $4.4bn of it from people over 60.

1 in 5
UK non-owners would invest if regulation came with **protection if the firm fails**.

02 Ten reasons people stay out, and what Quolin does about each

new reasons added in research

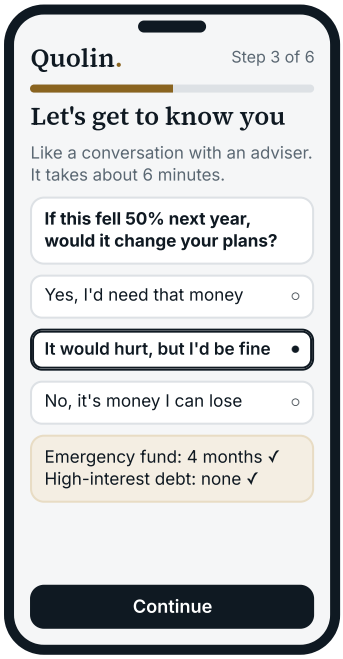

1	**Scams & horror stories** *"That's where you get robbed"*	**Scam Shield:** money only goes back to your own bank account; new wallets wait 24h.
2	**Volatility** *"Half gone overnight"*	**Calm by design:** small regular buys, a worst-year card, no price alerts.
3	**No recovery** *"One mistake, gone forever"*	**Bank-style recovery:** no seed phrase, password reset, a named beneficiary.
4	**Too complex** *"I can't explain a blockchain"*	**Learn to unlock:** the regulator's test becomes a 5-minute course.
5	**No visible value** *"Apple makes my iPhone. BTC makes...?"*	**What-it's-for cards,** plus tokenised gold and T-bills with real value behind them.
6	**No protection** *"If it goes bust, I lose it" (FTX)*	**Segregated custody** at a regulated custodian. Honest that it is not FSCS.
7	**"Not worth it for my money"** *"It's for whales"*	**From £10 a week.** Sized to your savings, not to traders.
8	**My bank warns me off** *Transfers to exchanges blocked or capped*	**Inside your bank:** the bank offers the careful option itself.
9	**Stigma** *"Not people like me"*	**Quiet brand:** no rockets, no leaderboards. It looks like a pension app.
10	**Tax, death, paperwork** *"What happens when I die?"*	**Done for you:** a tax report, a beneficiary, a statement your accountant understands.

Half the problem is who stands between you and the coins. Scams, no recovery and no protection are what a bank already fixes for savings: a name, a helpline, a password reset, a regulator.

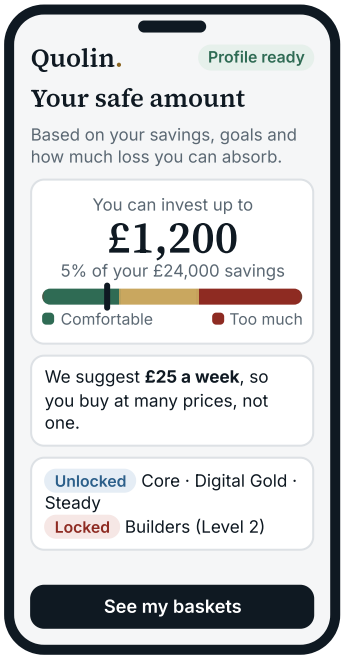

The other half is how crypto is presented. It is sold like a casino. Quolin presents it the way Vanguard presents index funds: a few assets, explained plainly, sized to what you can afford to lose.

03 The app

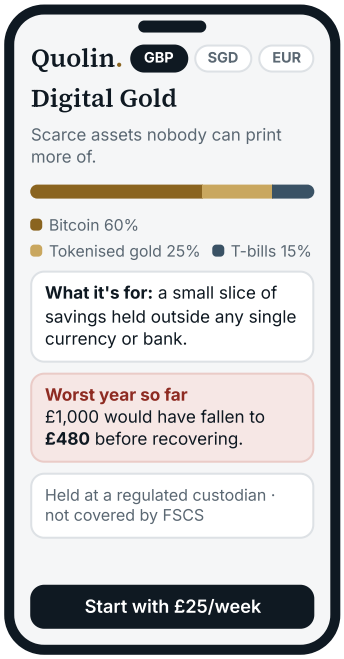

Own-brand app for the demo · white-labelled for each bank

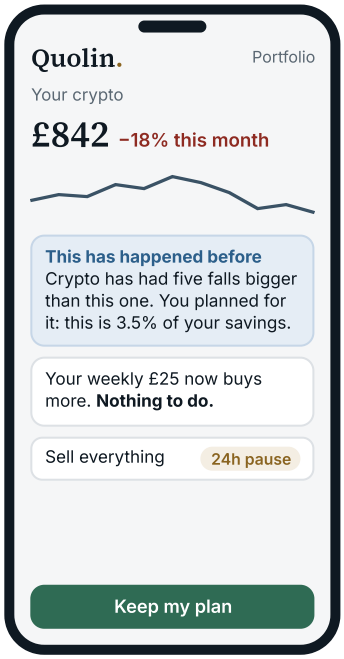

Fact-find
Goals, money, loss capacity, knowledge

Personal limit
The app that tells you to invest *less*

Approved baskets
Each with what-it's-for and worst-year cards

Calm by design
Context, not panic, when markets fall

Sources: FCA Cryptoassets Consumer Research 2025 (Wave 6); FBI IC3 Annual Report 2025. App figures are illustrative.

04 Onboarding is an adviser's fact-find, so nobody is sold the wrong thing

1 · YOU — About you
- Age, country, tax residence
- Dependants
- Retail or accredited
- Identity check (partner)

2 · MONEY — Your finances
- Income and spending
- Emergency fund
- Debts and their cost
- Savings and investments

3 · GOALS — What it's for
- Goal and time horizon
- When you need the money
- Other plans for it

4 · RISK — Risk and loss capacity
- Attitude to risk
- Capacity for loss
- Reaction to a 50% fall

5 · KNOWLEDGE — Learn to unlock
- Experience so far
- 5-minute course
- The regulator's test, passed

6 · RESULT — Your profile
- Personal limit
- Unlocked baskets
- Reasons in plain English
- Recorded, replayable

✓ Allow
Fits the profile. Here's your limit and the baskets that suit you.

◷ Not yet
No emergency fund, or expensive debt. *"Pay this off first. We'll remind you."*

⟳ Refer to a person
Signs of vulnerability, complicated circumstances, or two countries' rules apply.

✕ Not for you
Under 18, can't absorb any loss, or failed the test. Shown with the reason, never a hidden "no".

The rules behind every outcome come from the Quolin engine already built: jurisdiction rule packs, allow/block/refer with reasons, and a tamper-evident record that can be replayed. The bank signs off every rule and owns every client decision.

05 Approved List: rules differ by country

ASSET	TIER	UK	EU	SG	HK
Bitcoin	Core	✓	✓	✓	✓
Ether	Core	✓	✓	✓	✓
Tokenised T-bills (money-market fund)	Steady	?	?	✓	?
Tokenised gold (PAXG, XAUT)	Steady	?	✕	?	?
Solana and other large assets	Level 2	✓	✓	✓	?
Leverage, meme coins, anonymous issuers		✕	✕	✕	✕

✓ available to retail ? legal opinion needed ✕ not allowed or excluded by us. **EU:** no gold-backed token has been authorised under MiCA yet. **SG:** MAS has approved a tokenised US-dollar money-market fund for retail (from US$20). **UK:** tokenised money-market funds are mostly for professional investors so far; the crypto regime starts 25 Oct 2027. Where an asset isn't allowed, the engine hides it and the basket rebalances.

Core — Level 1
BTC 70 · ETH 30

Digital Gold — Level 1
BTC 60 · gold 25 · T-bills 15

Steady — Level 1
T-bills 45 · gold 40 · BTC 15

Build your own — Level 2
From the Approved List; the engine caps every weight.

06 Cross-border: where we start

1 · LEAD SINGAPORE
First bank pilot. The Risk Awareness Assessment has been required since June 2025, and our SG rule pack already exists. Tokenised T-bills are allowed for retail. Su-Lee's network is here.

2 · SCALE EU
Fastest way in for banks. Under MiCA Art. 60 a bank can offer crypto by *notifying* its regulator. No new licence, one rulebook for 27 countries, and banks are launching now (BBVA, Raiffeisen, Sparkassen).

3 · READY UK · HK
UK regime goes live 25 Oct 2027, with applications open now: pitch "ready on day one". **HK** requires a personal limit per client, which is our core mechanic. Then AU, MY and US through existing contacts.

How one app goes cross-border: each country is a **rule pack** (who may buy, which assets, test, limits, cooling-off) plus a **currency layer**. The client sees their home currency; prices come from live FX. When two countries' rules apply, the engine says which governs, or refers the case.

GBP £ · SGD S$ · EUR € · HKD HK$ · AUD A$ · MYR RM · USD $

07 How it reaches people

Customer — Opens their bank's app. Same login, same helpline, same name they trust.

▼

Quolin — Fact-find · personal limit · Approved List · baskets · Scam Shield · record and regulator reports

▼

Rails partner — Execution and regulated custody: Bitpanda, Zerohash, Coinbase

Model: licence per bank per country, plus a fee per active investor. **Never a cut of trades**, so the gate has no reason to say yes. The own-brand Quolin app is the demo and a later direct option.

08 Team and next 90 days

CO-FOUNDER · PRODUCT
Volodymyr Romanenko
Originated Quolin; product, regulatory research and the first prototype. IMC (CFA UK).

CO-FOUNDER · FINANCE & INSTITUTIONS
Su-Lee Oei
Three decades in institutional finance across Asia-Pacific. CA ANZ, GAICD, Qualified Risk Director.

TECHNICAL LEAD
Daniel Fleming
Financial-markets engineer: risk, reconciliation and analytics systems. Leads the build from Sydney.

WEEKS 1–4
Clickable phone demo: fact-find, limit, baskets, crash mode, and the bank's compliance view.

WEEKS 3–8
Demo to bank contacts in SG, MY and HK, plus one EU bank. Goal: 3 letters of pilot interest.

WEEKS 6–10
Legal opinions: our role vs the bank's (advice line), and whether tokenised gold and T-bills are allowed in SG and the UK.

WEEKS 8–12
Rails partner sandbox (Bitpanda or Zerohash). Pre-seed raise on the back of the pilot letters.

Sources: FCA PS26/9–13 (June 2026); EU Regulation 2023/1114 (MiCA) Art. 60 and ESMA Q&A; MAS PS-G03 and MAS approval of Franklin Templeton's tokenised retail fund; SFC; press reports on bank launches (Bitpanda, Raiffeisen, BBVA). Allocations and availability are working assumptions pending legal opinions. Quolin is not advice; the partner bank is the regulated firm.
